

## From The MD's Desk

# A New Digital World for Debt

An acceptance or agreement on debt balances throughout the journey of the debt is good for the borrower, the lender and all other stakeholders of the debt ecosystem.

When all these stakeholders can view the same debt balance at a single source, such a repository serves as a single source of truth.

With the Government of India establishing a repository that stores data points of each financial contract - including the amount of debt, outstanding balance, security interest of lenders, default and financial statements or repayment history, accessing all debt details with a single click becomes possible for all stakeholders.

**Welcome to the world of Information Utility - A new digital world for debts!**
